

IT441-Enterprise Architecture

Dr. Islam Taj-Eddin

IT Dept., FCI, Assiut Univ.

Introduction and Overview of EA

Enterprise?

- The term **enterprise** is used because it is generally applicable in many circumstances, including:
 1. Public or private **sector** organizations
 2. An entire business or corporation
 3. A **part of a larger** enterprise (such as a business unit)
 4. A **conglomerate of several organizations**, such as a joint venture or partnership
 5. A multiply outsourced business operation
 6. **Many collaborating** public and/or private organizations **in multiple countries**

An Enterprise

- **Enterprise** – An organization or sub-activity whose boundary is defined by commonly held goals, processes, and resources.
- This includes whole organizations in the public, private, or non-profit sectors, part(s) of an organization such as business units, programs, and systems, or part(s) of multiple organizations such as consortia and supply chains.

Examples in Egypt

- Telecom: Mobinil, Etisalat, vodafone, TEDATA
- Technology: Microsoft Egypt, IBM Egypt
- Oil & Gas: Enppi
- Hypermarket: Carefour
- Travel: EgyptAir
- Retail: Cook Door, GAD

Architecture

A **systematic** approach that organizes and guides:

1. analysis,
2. design,
3. planning,
4. and documentation activities.

Enterprise Architecture

- enterprise architecture, the practice that tries to describe and control an organization's structure, processes, applications, systems, and technology in such an integrated way.
- we focus on methods and techniques for making and using integrated descriptions by means of architecture models, visualization of these models for various stakeholders, and analysis of the impact of changes.

Enterprise Architecture

- The analysis and documentation of an enterprise in its current and future states from an integrated strategy, business, and technology perspective.

$$EA = S + B + T$$

Enterprise Architecture = Strategy + Business + Technology

Strategy

Strategy

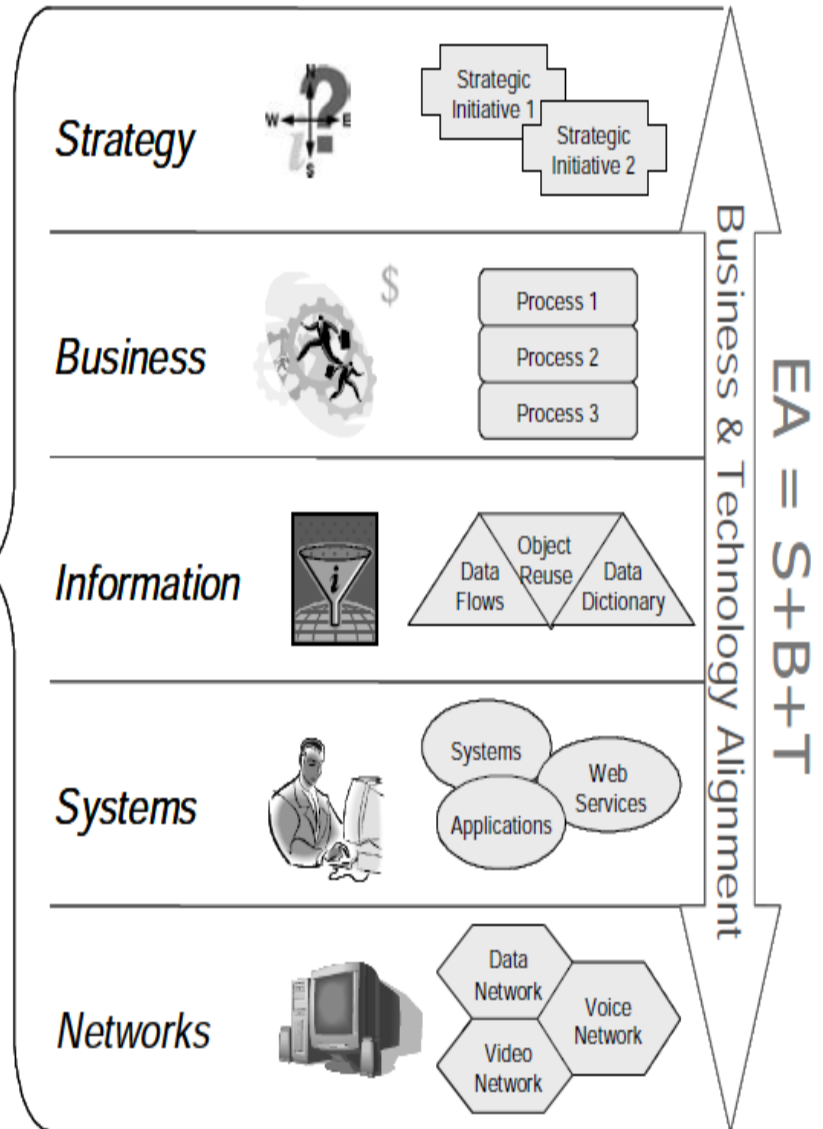

- **Strategy** a coordinated set of actions to fulfill objectives, purposes, and goals. The essence of a strategy is setting limits on what the business will seek to accomplish.
- Strategy starts with a **mission** (for what purpose does the enterprise generally exist)
- **Vision** (what kind of organizations does the enterprise generally intend to be)
- **Strategic goals, ongoing or new programs and outcome measures.**

*Non-integrated
processes
and systems
in different parts
of the enterprise*

Enterprise Architecture

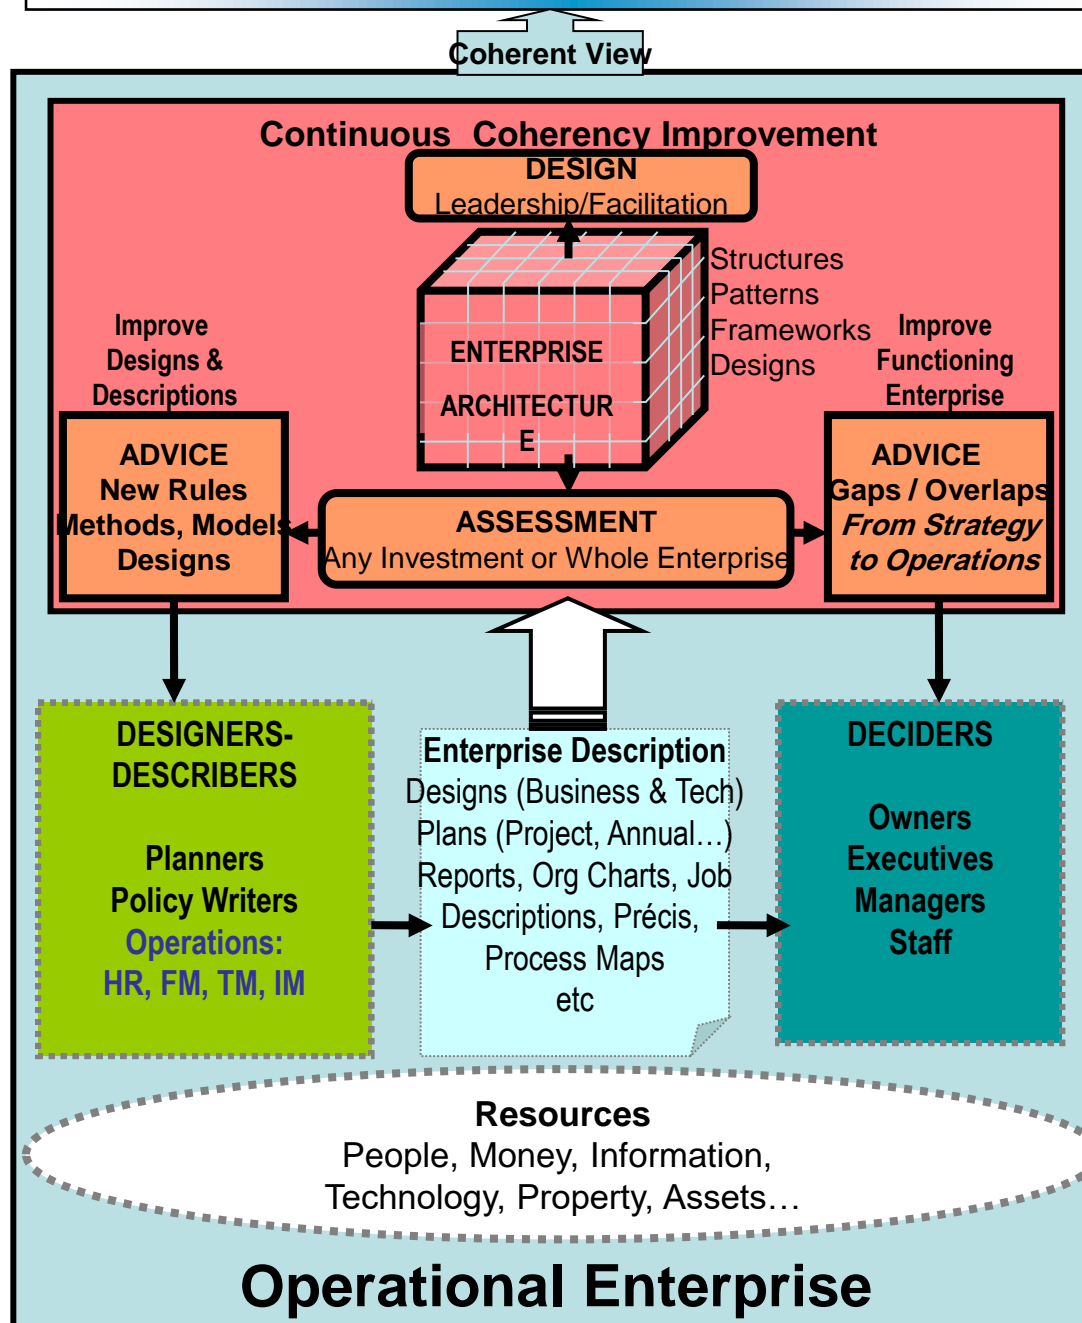

*Integrated processes and systems
across the entire enterprise*

Observers – Stakeholders – Partners

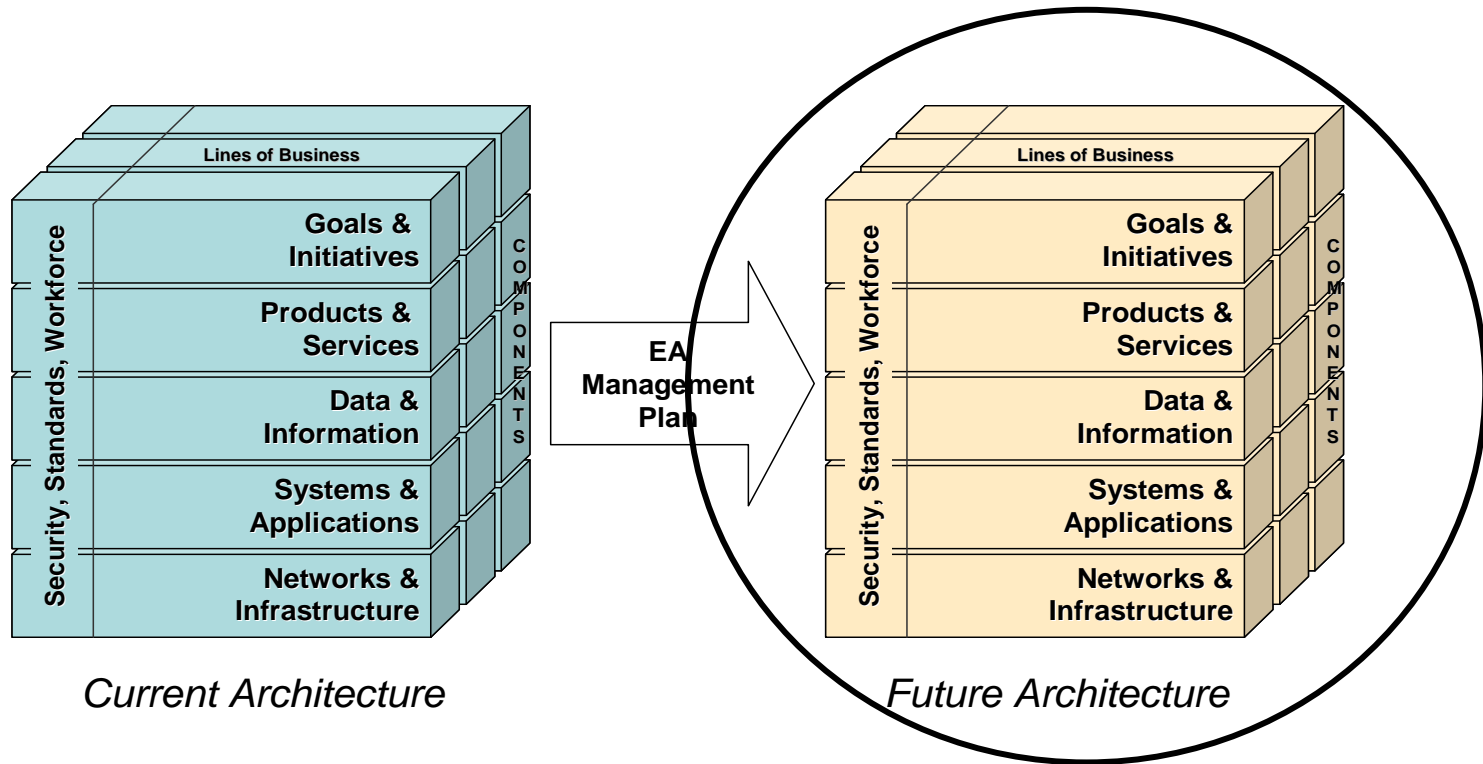

EA Transition Planning

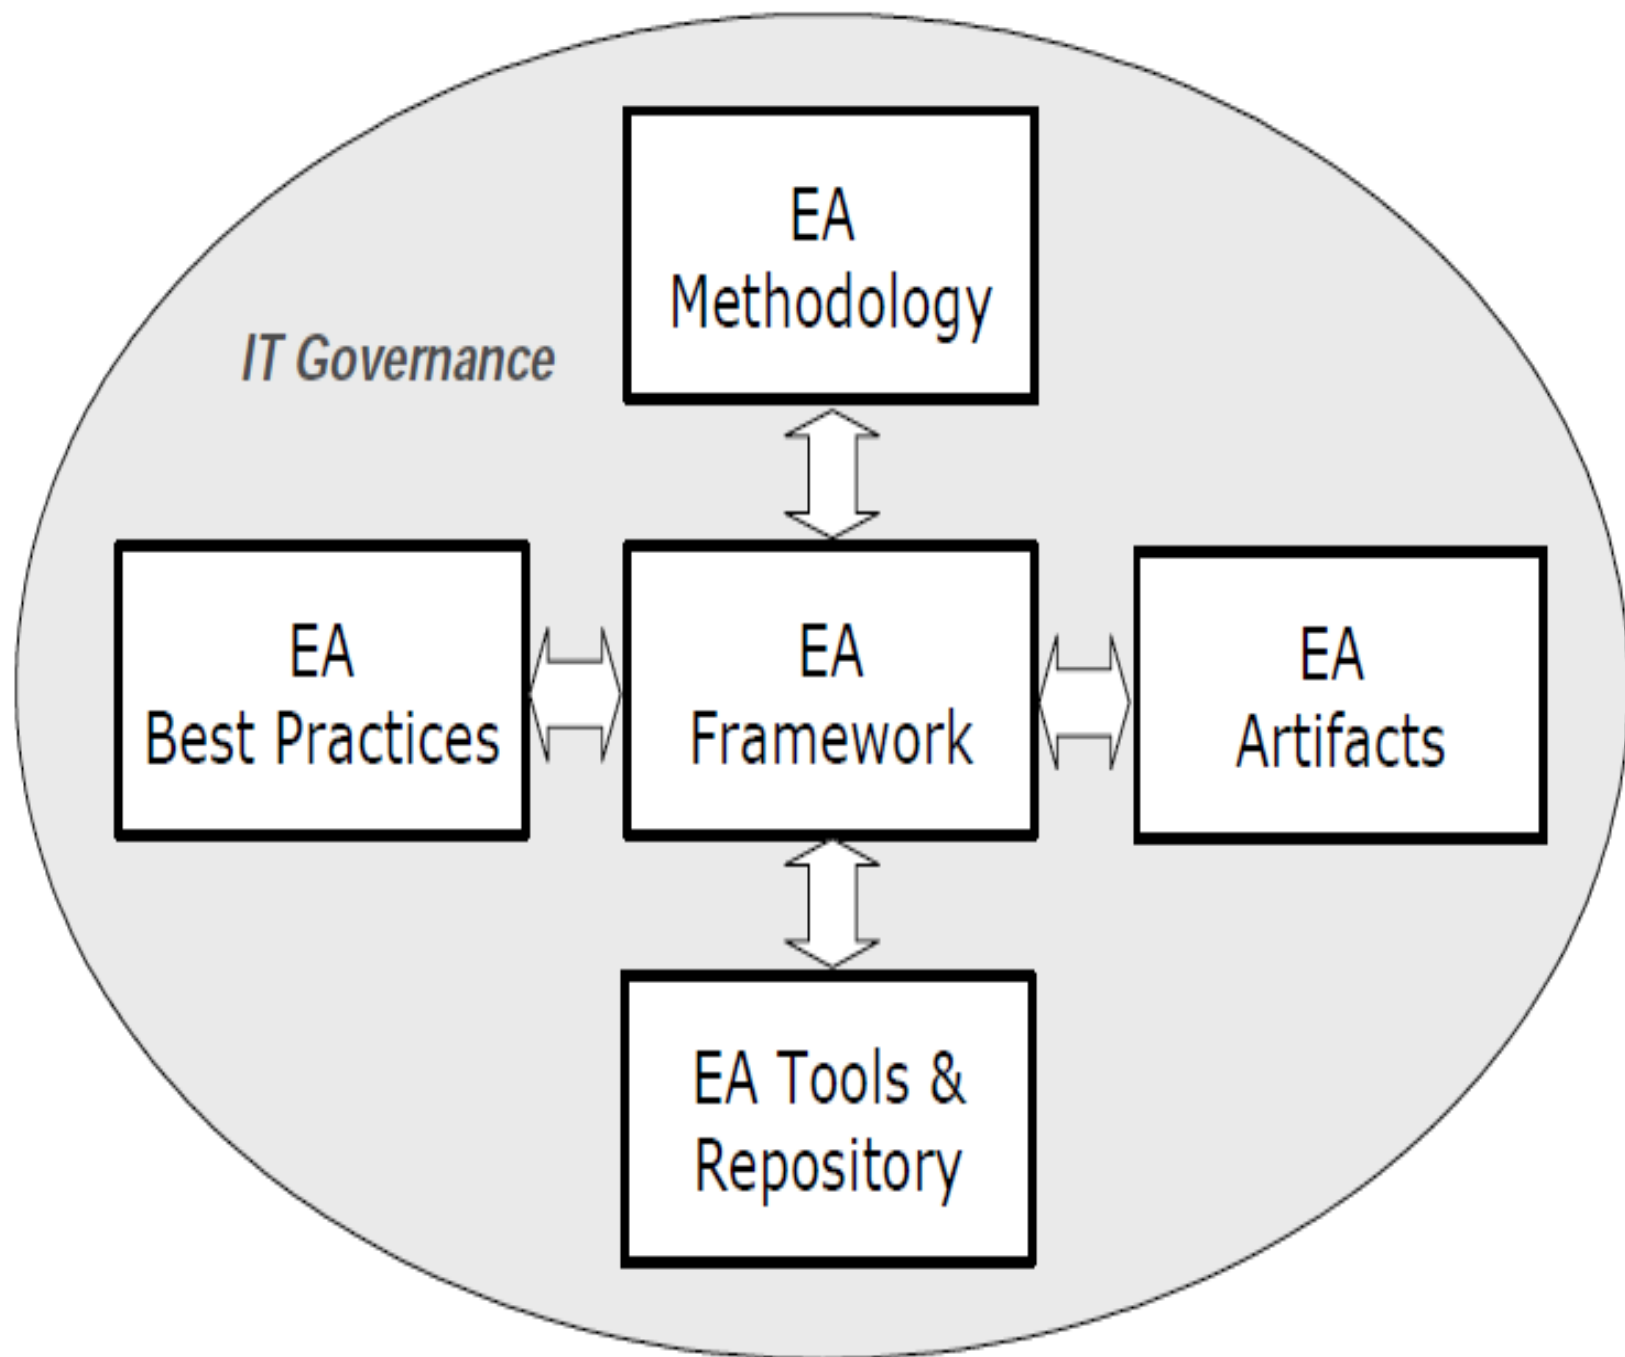

- An enterprise architecture is in **continual transition as implementation and upgrade projects are completed.**
- Needs coordination, prioritization, and oversight. "We need a plan".

Forward-Looking Architecture

- One of the purposes of an EA program is to develop future views of the architecture

- EA is both a management program and an analysis and design method

- As a management program, EA provides:

Resource Alignment:

- Resource planning and standards determination

Standardized Policy:

- Resource governance and implementation

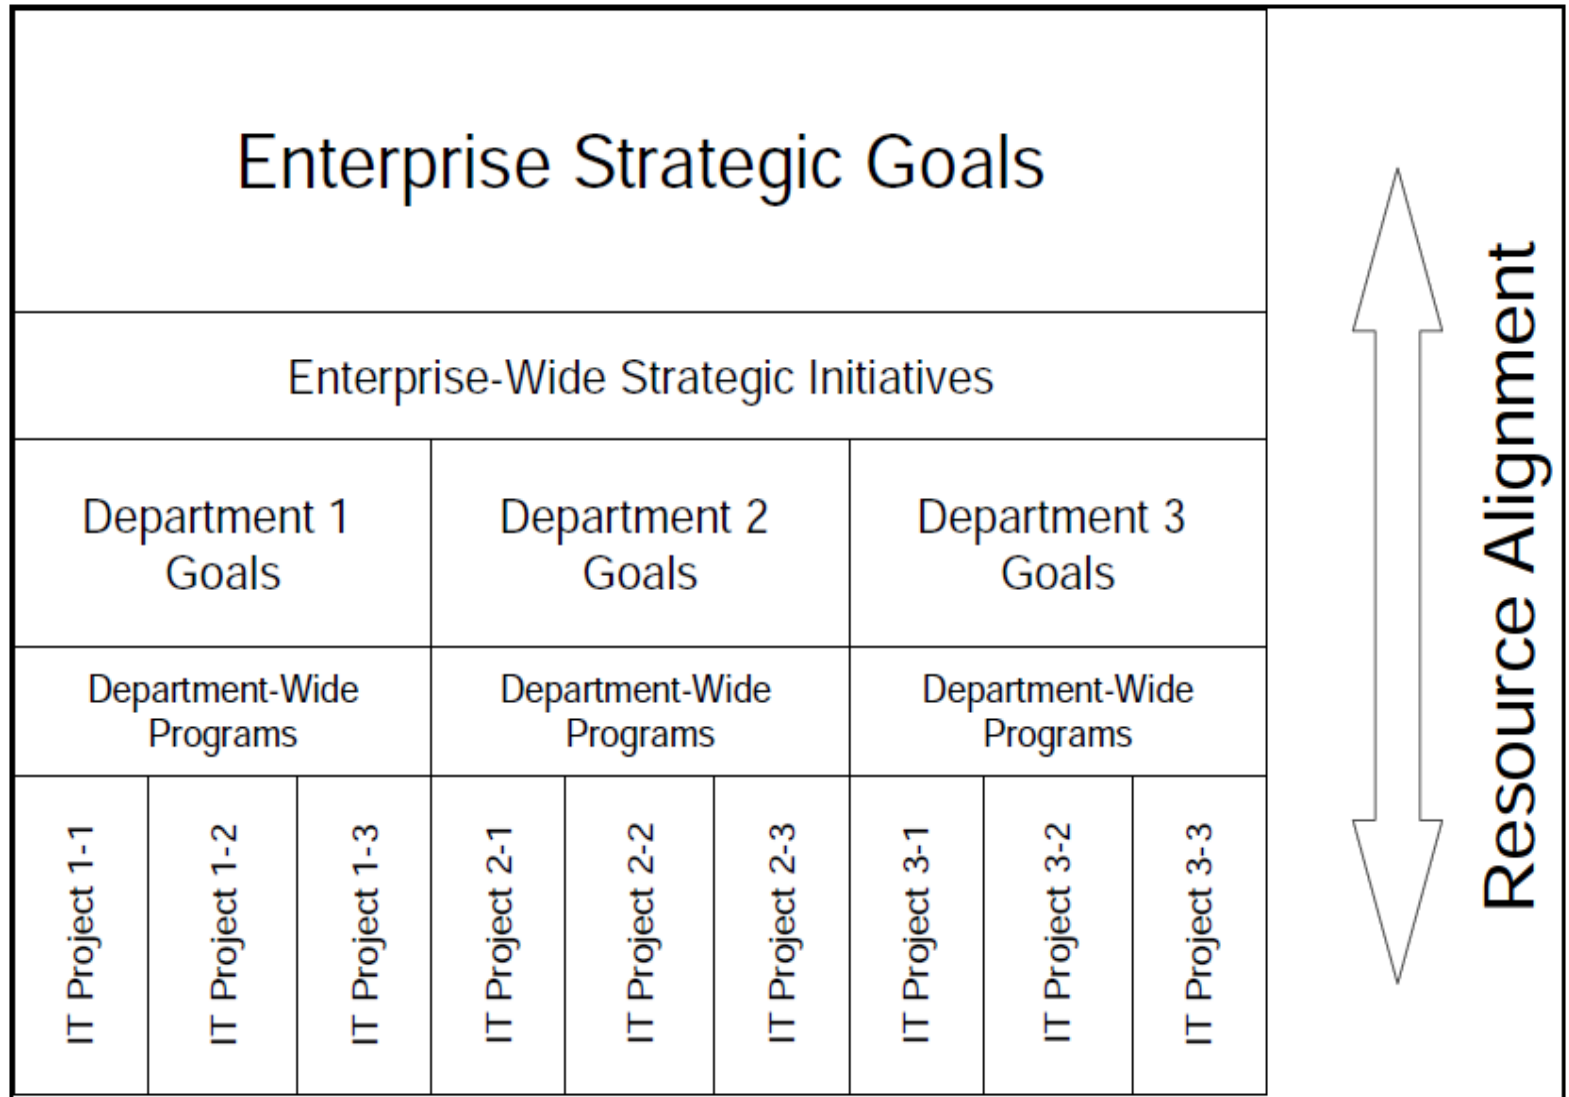

Decision Support:

- Financial control and configuration management

Resource Oversight:

- Lifecycle approach to development/management

Resource Alignment

As an analysis and design method, EA provides:

- EA Approach:

A modeling framework and
implementation methodology

- Current Views:

Views of **as-is** strategies, processes, and
resources

- Future Views:

Views of **to-be** strategies, processes, and
resources

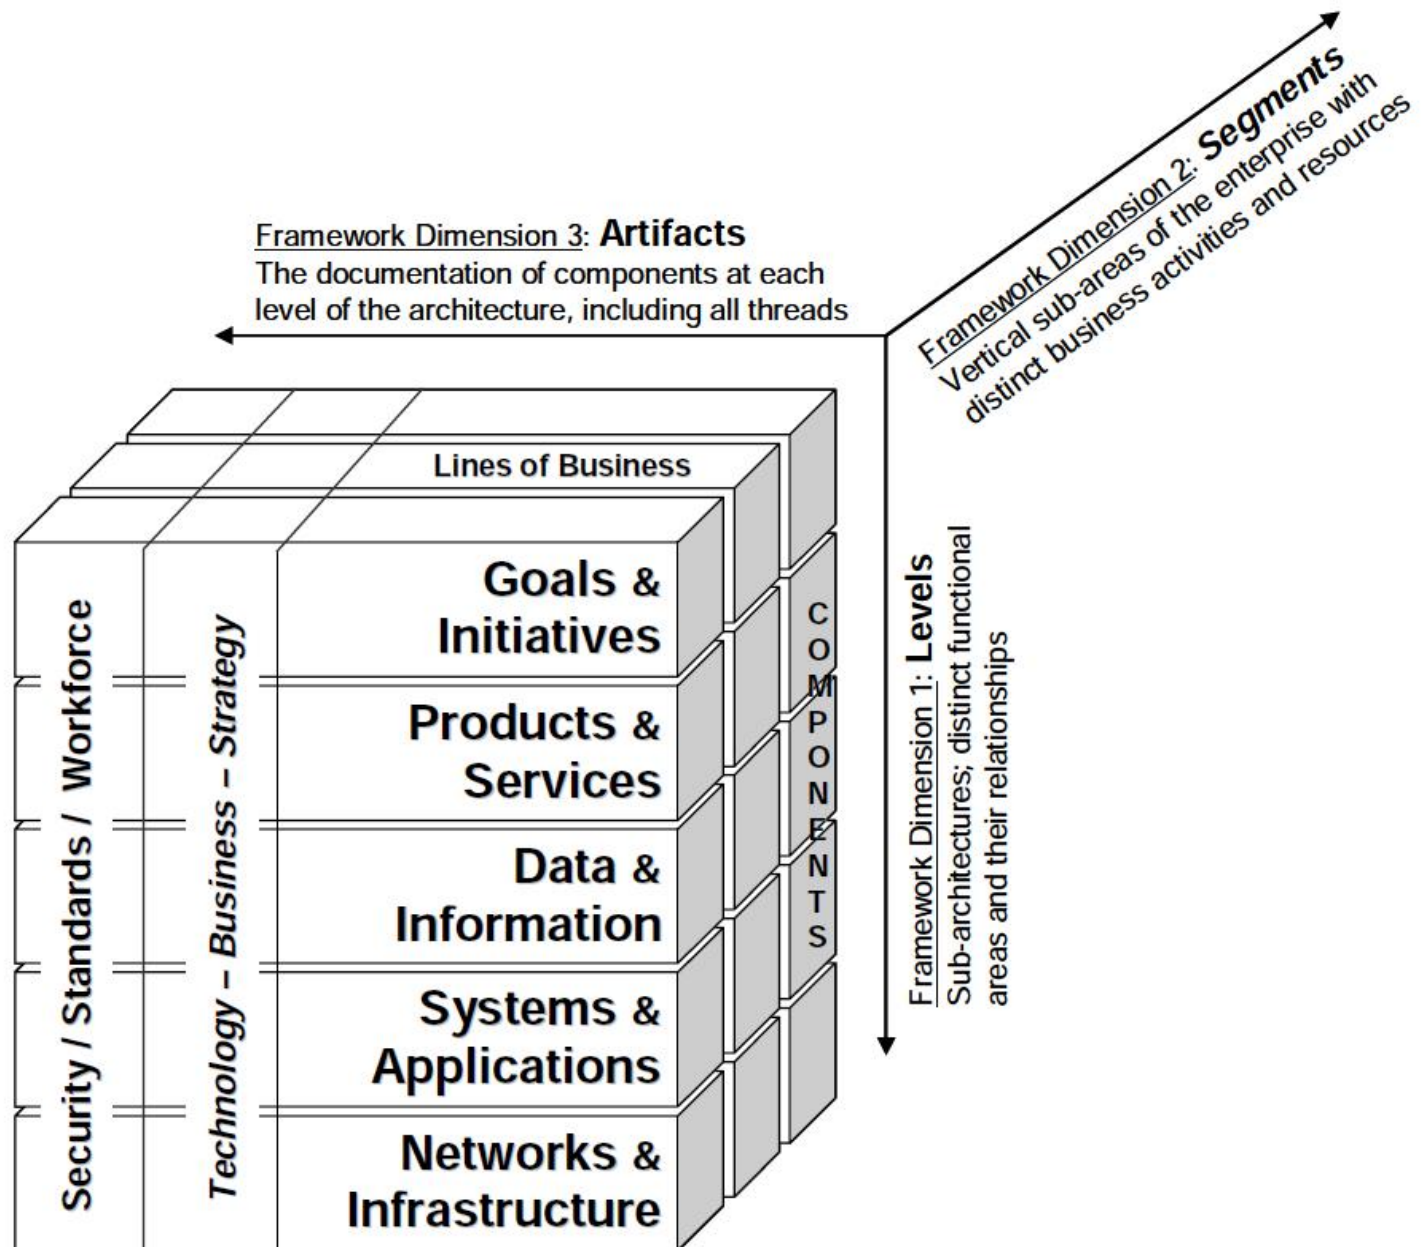

- EA Management Plan:

A plan **to move from the current to the
future EA**

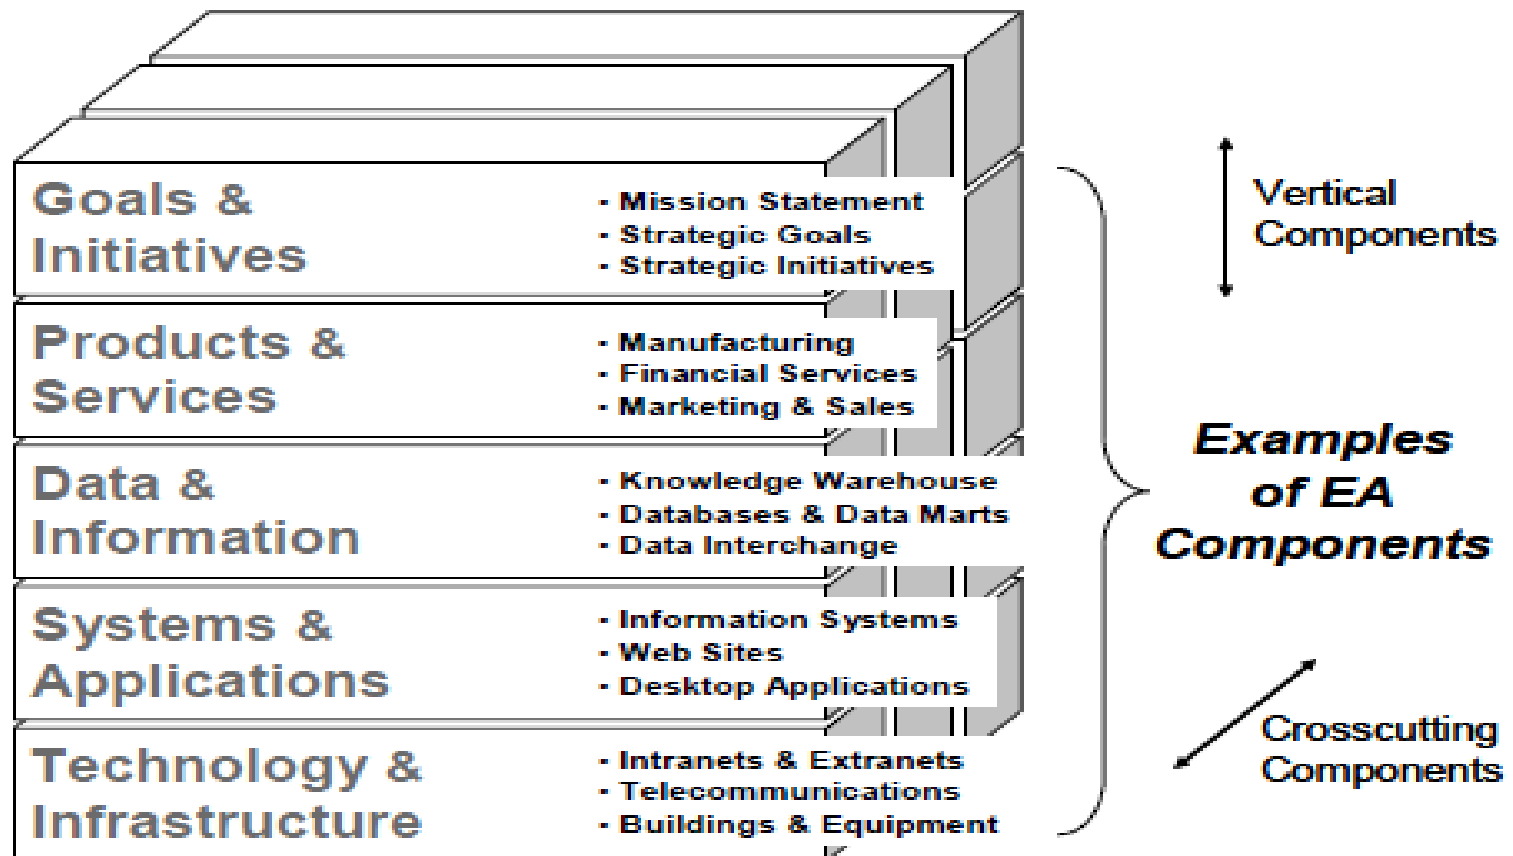

EA as an analysis and design method,

1. EA Analysis and Design Element #1: The Framework,
2. EA Analysis and Design Element #2: EA Components,
3. EA Analysis and Design Element #3: Current Architecture,
4. EA Analysis and Design Element #4: Future Architecture,
5. EA Analysis and Design Element #5: EA Management Plan,
6. EA Analysis and Design Element #6: Threads.

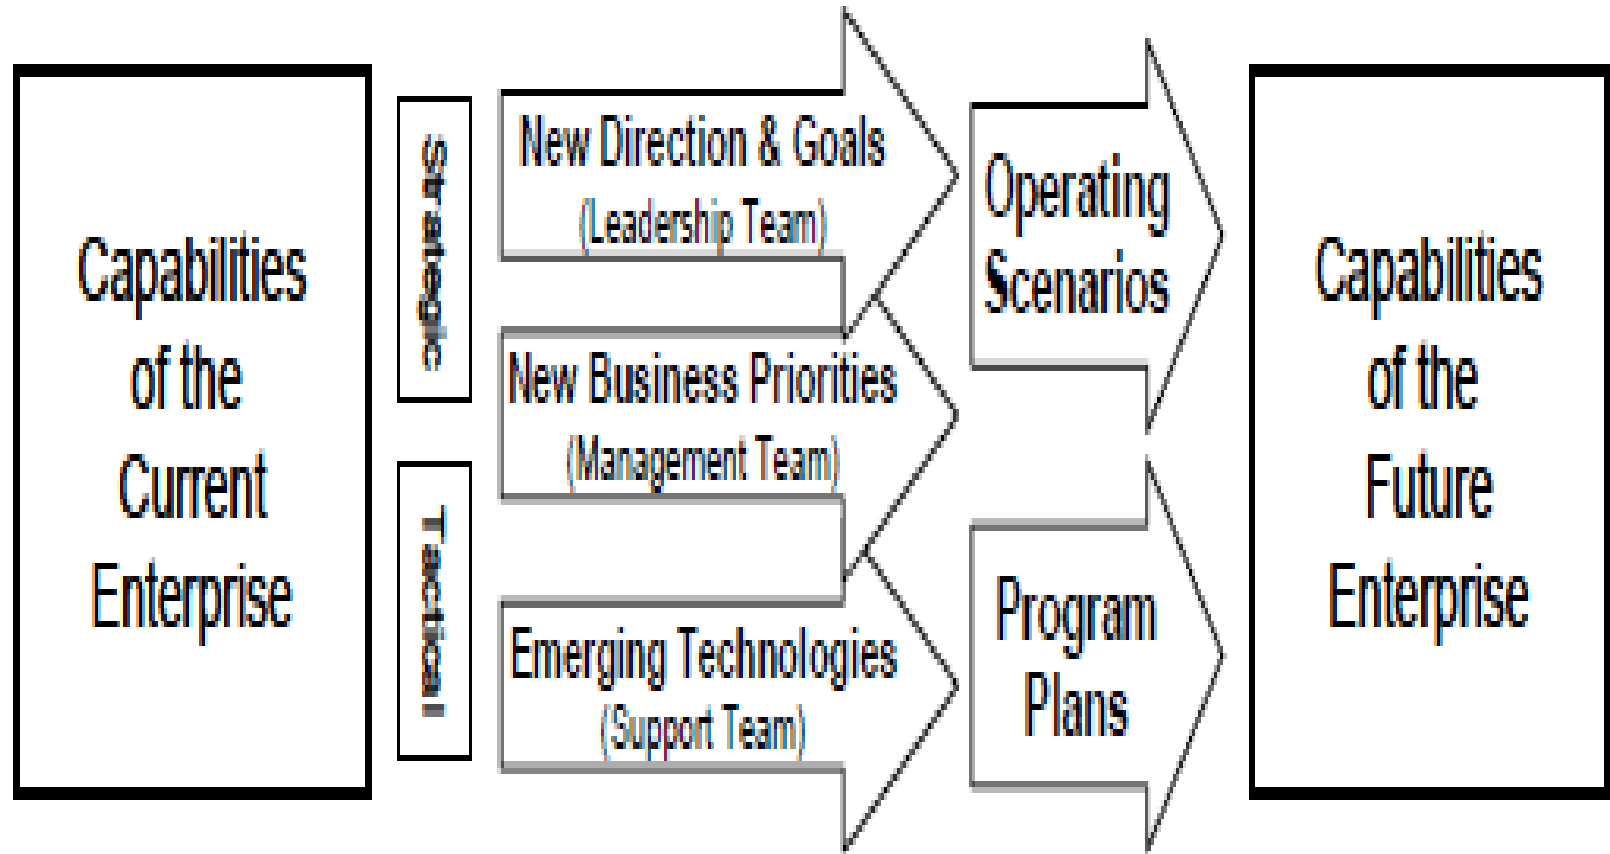

The EA³ "Cube" Framework

EA Components

Future Architecture

Threads

EA documentation includes 'threads' of common activity that are present in all levels of the framework.

These threads include:

- IT-related security,
- standards,
- and workforce considerations.
